ABSTRACT:

CHG DATE=19990617 STATUS=O> The particles of a single-base or multi-base propellant charge powder for ammunition are coated with a titanium chelate complex, for example titanium acetylacetonate. The coating is effected by spraying with the dissolved titanium chelate complex and subsequently moving the propellant charge powder at an elevated temperature. As a result of the coating, the bulk density of the propellant charge powder is markedly increased over that of a propellant charge powder surface-treated only with graphite. In addition, the coating also has an effect inhibiting barrel erosion and, in the case of multi-base propellant charge powders, an effect inhibiting exudation. The proportion by weight of the titanium chelate complex is about 2% by weight, relative to the uncoated propellant charge powder.

ABSTRACTED-PUB-NO: DE 29618429U

BASIC-ABSTRACT:

A cleaning tool for a firearm barrel is fired like a bullet and comprises a

cartridge shell (2) with an igniter (28) and an elastic cleaning plug (6) of a dia. corresponding to the barrel. The cleaning plug (6) is inserted into the shell (2) like a bullet.

USE - The cleaning tool can be used for various firearms, e.g. pistols, rifles or anti-aircraft guns.

ADVANTAGE - The tool can easily be carried by the gun user, is simple to use by merely inserting in the gun and firing and is inexpensive to produce.

ABSTRACTED-PUB-NO: EP 1110927A

BASIC-ABSTRACT:

NOVELTY - Antiwear additive (I) for firearm propellants comprises at least one metal and/or metal oxide in the form of a powder with a particle size of less than 1 mu m.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) a combustible munitions object, especially a combustible cartridge case, containing (I);
- (2) a propellant containing 1-20 wt.% of an energetic additive comprising titanium or aluminum powder with a particle size of less than 1 mu m.

USE - (I) is useful for reducing radial wear in gun barrels.

ADVANTAGE - Barrel wear is reduced without impairing the ballistic performance of the propellant, and performance can actually be improved if (I) is a titanium or aluminum powder.
